Projects

Online Food Ordering Website

This is a full stack Project done by using React JS for Front end and Mongo DB , Express JS, Node JS for Backend. It presents an online food ordering platform. Authenticated users can order foods through this site. It has two modules, Admin module and User module. Context API is used for managing states.

Real Time Chat Application

This project presents a real-time chat application developed by using React for the front-end and WebSocket.io for enabling live, bidirectional communication between users. Redux is used for State Management. The application provides a seamless and responsive interface that allows users to engage in instant messaging across multiple devices.

Memory Card Game

This Project is developed by using HTML, CSS and JavaScript. The game starts with all the cards face down and players take turns to turn over two cards. If the two cards have the same picture, then they keep the cards, otherwise they turn the cards face down again

Task Management Application

Task management application build with react.js and JSON-Server. User can add, update and delete tasks and also user can view completed task history.
